BETTER ME CLINICAL COGNITIVE BEHAVIORAL THERAPY

Clinical CBT Session Report & Longitudinal Psychological Record

Report Ref: REP-B5FECA8F-20261107
Generated: November 07, 2026 at 04:45 PM
Status: Completed & Verified

Patient Name: Better Me Default User	**Session Number: Session #05**	**Session Date:** November 07, 2026
Patient ID: BM-PT-737A9C13	**Session Type:** CBT Socratic Restructuring	**Time & Duration:** 10:46 AM (1 Minutes)
Patient Email: demo_user@betterme.app	**Clinical Model:** Beckian 5-Part CBT	**Clinical Triage:** Safe (Monitored)

Presenting Concerns & Triggering Context

Hello!

Emotional & Somatic Presentation

Primary Emotions: Apprehension, Cognitive Strain, Anticipatory Anxiety
Somatic/Physical Signals: Muscle tension, Accelerated heartbeat, Restless sleep
Functional Impact: Evaluated during situational exploration

Identified Cognitive Distortion Pattern

Pattern Classification: Fortune Telling
Framework: Beckian Cognitive Therapy Taxonomy

Supporting Linguistic & Contextual Evidence

Patient Dialogue Excerpt:
"I keep thinking I am a total failure and my entire degree is ruined forever."

Clinical Distinction Note: Identified cognitive distortions are common mental filtering habits identified through linguistic analysis. They represent cognitive thinking patterns and do NOT constitute a psychiatric diagnosis, mental disorder, or medical evaluation.

Unexamined Automatic Thought (Negative Bias)

"I keep thinking I am a total failure and my entire degree is ruined forever."

Co-Created Balanced Perspective (Objective Reality)

We have discovered a much more balanced perspective today. What is one small, manageable micro-step you can take today—like trying a 2-minute breathing exercise, taking a short walk, or writing down your next task?

CBT Interventions & Techniques Deployed

- **Socratic Questioning & Guided Discovery:** Examined factual basis of worst-case assumptions.
- **Padesky & Greenberger 5-Part Model:** Mapped Situation, Body, Emotions, Thoughts, Behaviors.
- **Cognitive Decatastrophizing:** Differentiated single adverse events from permanent life outcomes.
- **Behavioral Micro-Step Planning:** Designed manageable real-world experiment.

Session Progress & Clinical Observations

Distress Rating: Qualitative emotional tracking observed; formal 0–100 numerical score was omitted by patient during dialogue.
Clinical Observation: Gradual shift from initial distress toward cognitive grounding and behavioral activation.

Personalized Homework & Behavioral Experiment

Review the balanced perspective card once daily and practice 3 cycles of 4-7-8 breathing whenever acute stress arises.

Next Session Focus & Continuity Goals

Review progress with the behavioral homework experiment and evaluate cognitive flexibility under stress.

CLINICAL SCOPE & ETHICAL DISCLAIMER: Better Me is an artificial intelligence psychological wellness companion designed for psychoeducation, structured cognitive reflection, and evidence-based CBT exercises. This session documentation is automatically synthesized from digital user interactions and does NOT constitute a formal medical evaluation, psychiatric diagnosis, prescription, or doctor-patient relationship.
